

Essential Skills - Lesson 4

Please review the following videos before the Essential Skills class.

<https://www.youtube.com/watch?v=1RpJ2Pcdggw>

Have any questions about the above video ready for class. As a bit of fun today look at the following site. It discussed 10 things that every programmer should know. Also note that all these topics will be covered in your program of study – some will be covered this term and others will be covered in later terms.

<https://www.logicraysacademy.com/blog/things-every-programmer-should-know/>

Add to your presentation and include a technical briefing on any three career choices. Your slides for this part of the presentation should include at least:

- Job Title – some jobs may have more than 1 title
- Job description with some of the common responsibilities.
- Job outlook and salary expectations.

Do a bit of research on any of the topics listed in the site “10 things every programmer should know”. Add a final slide to your presentation with information about the topic that you chose to research.

See you at 10.
